

ABSTRACT OF THE DISCLOSURE

The present invention is a session management method and system. The method includes initiating a first session in a first device connected to a data source; initiating a second session in the first device while the first data session is still running; stopping the first session in the first device; and continuing the first session in a session management server. The system includes a first device that is able to receive data from a data source; a control device connected to the first device; and a session management server connected to the first device and the data source that controls the flow of data from the data source to the first device; wherein the control device is used to control the session management server.
